FileVault
Turn Off...
FileVault secures the data on your disk by encrypting its content automatically.
WARNING: You will need your login password or a recovery key to access your data. A recovery key is automatically generated as part of this setup. If you forget both your password and recovery key, the data will be lost.
FileVault is turned on for the disk "MAC".
A recovery key has been set.
Lockdown Mode
Turn On...
Lockdown Mode is an extreme, optional protection that should only be used if you believe you may be personally targeted by a highly sophisticated cyberattack. Most people are never targeted by attacks of this nature.
When Mac is in Lockdown Mode, it will not function as it typically does. Applications, websites, and features will be strictly limited for security, and some experiences will be completely unavailable.
